Years 1 and 2 Maths

Progression in single digit addition facts information for parents/carers

The following sheet details the number facts that children should be fluent in by the time they leave Year 2. The facts are split into Year 1 and Year 2 depending on the mental strategy the children need to use in order to solve the calculations. Fluency is a key part of the mathematics curriculum and children are encouraged to practise and become confident in using mental strategies.

In Years 1 and 2 the children will be taught these addition facts throughout the year. Although many children will be able to solve these using counting strategies they are only considered fluent if they can quickly recall the answers by solving them mentally.
